

SKIPILY

Skipily orders API

Retrieving orders via API and writing back fulfillment — for the Connection to Shopify, Odoo or your own ERP. No second tool, no manual transfer.

- **Endpoint:** `https://vcjwlyqkfkszumdrfvtm.supabase.co/functions/v1/orders-api`
- **Auth:** Header 'x-api-key: <your API key>' (provider portal → master data → API & integration)
- **Prerequisite:** Pro/Enterprise plan, shop active
- **Scoping:** Each key only sees its own orders.

Two integration paths (combinable)

Path	Direction	What for?
Pull (this API)	Skipily → your system	Retrieving Orders, Increment Sync (<code>updated_since</code>), Back-fill
Push (Webhooks)	Skipily → your URL	Real-time notification of new/changed order (set <code>webhook_url</code>)

Recommendation for ~50 orders/day: **Webhook** for real-time + **hourly pull** with '`updated_since`' as a safety net (catch up on missed webhooks).

Endpoints

List orders

```
""bash
```

```
curl "https://vcjwlyqkfkszumdrfvtn.supabase.co/functions/v1/orders-api?status=confirmed&limit=50" \
```

```
-H "x-api-key: DEIN_KEY"
```

```
...
```

Filters:

Parameter	Example	Purpose
Status	confirmed	pending/confirmed/shipped/delivered/cancelled
payment_status	paid	Get paid only
updated_since	2026-06-15T00:00:00Z	Increment sync — only changed since then
created_since	2026-06-15T00:00:00Z	only new orders
limit / offset	50 / 0	Pagination (max 200)
sort / order	updated_at / desc	Sorting

Single Order

```
curl ".../orders-api?order_number=SKP-2026-00123" -H  
"x-api-key: DEIN_KEY"
```

Answer (shortened)

```
{
  "orders": [{
    "id": "uuid",
    "order_number": "SKP-2026-00123",
    "status": "confirmed",
    "payment_status": "paid",
    "subtotal": 129.00, "shipping_cost": 5.90, "total":
134.90, "currency": "EUR",
    "commission_rate": 7.0, "commission_amount": 9.03,
    "shipping_name": "Max Mustermann",
    "shipping_street": "Hafenweg 1",
    "shipping_postal_code": "24159",
    "shipping_city": "Kiel", "shipping_country": "DE",
    "tracking_number": null, "tracking_url": null,
    "created_at": "2026-06-15T09:12:00Z", "updated_at":
"2026-06-15T09:20:00Z",
    "items": [
      { "product_name": "Impeller Jabsco 1210-0001",
"product_sku": "JAB-IMP-01",
        "quantity": 2, "unit_price": 29.90, "total": 59.80
      }
    ]
  }],
  "pagination": { "limit": 50, "offset": 0, "total": 1,
"returned": 1 }
}
```

Write back fulfillment (report shipping)

When your ERP/Shopify ships, write back status + tracking — the Buyer is automatically notified:

```
curl -X PUT ".../orders-api?id=ORDER_UUID" \
  -H "x-api-key: DEIN_KEY" -H "Content-Type:
application/json" \
  -d '{ "status": "shipped", "tracking_number":
"00340434161234567890", "tracking_url":
"https://dhl.de/..." }'
```

Accepted Status: 'Confirmed', 'Shipped', 'Delivered', 'Cancelled'.

Integration Odoo

- Pull: Scheduled action, e.g. every 15 minutes: 'GET ...? updated_since=<last sync>' → create/update sale orders / pickings.
- Push back: When confirming delivery in Odoo → 'PUT ...? id=' with 'status=shipped' + tracking.
- Idempotency: 'order_number' as an external reference ('client_order_ref') → don't store duplicates.

Integration Shopify

- Mirror skipily orders via pull as Shopify orders (Order Create API), 'order_number' as 'note'/'tags'.
- Shopify-Fulfillment-Webhook → `PUT ...` an Skipily mit Tracking.
- Alternatively, direct webhook reception: set 'webhook_url' in the provider profile to a Shopify flow/middleware endpoint.

Error codes

HTTP	Significance
401	x-api-key missing or invalid
403	Tariff too low (Pro/Enterprise required)
404	Order not found (or does not belong to this key)
400	invalid parameter / empty PUT
