Set up Sendcloud shipping in Skipily

Connect your own Sendcloud account. Skipily then creates the shipping label automatically on every shipment confirmation.

Important - how shipping costs and Sendcloud work together:
• Customer price: comes from your Skipily shipping-cost engine (Profile -> Shipping costs). Sendcloud does NOT change what the customer pays.
• Label: Sendcloud creates the label automatically on 'Confirm shipment' and returns the tracking number.

Step by step

1. In the Skipily provider portal open Profile, section 'Sendcloud shipping'.

2. Sign in at sendcloud.com (or create a free account).

3. In Sendcloud: open Settings -> Integrations -> 'Sendcloud API'.

4. Create an API key and copy the Public Key and Secret Key.

5. Back in Skipily: paste both keys into Public Key and Secret Key and click 'Connect to Sendcloud'.

6. Skipily verifies the keys. On success it shows 'Connected' with your account name.

Automation & options

• Toggle 'Create label automatically on shipment': on once connected. When you confirm an order, Skipily creates a parcel + label in Sendcloud (using your Sendcloud shipping rules).

• If you enter a tracking number yourself, it takes precedence - no automatic label is created then.

• 'Test connection' checks the keys anytime; 'Disconnect' removes them. Only company admins can connect.

• The Secret Key is stored server-side only and never shown in the browser.
